How to work with Built-in and Third-Party Macros

The Table Filter, Charts & Spreadsheets app is compatible with the built-in Confluence macros and the third-party apps that output table data. All you need is to paste the macro into the macros included in the app, and that's done.

In this section, you'll find some use cases. You can try any other macro combinations according to your use cases.

If you experience issues with combining the macros with table data outputted by some macro or app, please contact us.
