

TeamCity Integration 7/12/2019

Installation of the current release requires manual approval by Jira Administrator in UPM of Jira Cloud. This is caused by extension of the permission scope.

This release requires extension of the permission scope. In addition to the 'read' scope, you need to grant the 'write' and 'delete' scopes.

New in this release

Integrated the app into the Development section and added output of the deployment information.

Now you can view information about the latest builds in the Development section. Additionally, you can track details of your deployments and view their status at once.

The screenshot shows a Jira issue page for 'JTC-353' titled 'Update the Fixed in Build custom field to support multiple build configurations'. The page features a sidebar on the left with navigation options like Boards, Reports, Releases, and Issues and filters. The main content area includes a description, environment details, and an activity section with a comment input field. On the right, a metadata panel lists various fields: STATUS (To Do), ASSIGNEE (Unassigned), REPORTER (Dmitry Zagorovsky), DEVELOPMENT (1 branch, 7 commits, 1 pull request, 1 build), RELEASES (Staging), LABELS (None), PRODUCT & COMPONENT (None), and PRIORITY (Major). Two callout boxes are overlaid on the image: one pointing to the '1 build' entry in the DEVELOPMENT section with the text 'VIEW STATUS OF THE LATEST BUILDS' and 'Quickly find out the status of the latest builds in the Development section of the issue'; the other pointing to the 'Staging' entry in the RELEASES section with the text 'VIEW STATUS OF DEPLOYMENTS' and 'Check the status of your build deployments in Jira'.

Integrated the app into the Release Hub.

Now you can view status of the latest build for each issue listed in the Release Hub. This way you can see whether you can roll out a new release.
