

# Smart Attachments 2.1.0

## New in this release

Exposed [Java API methods](#) that you can use in the app.

Now you can create your own automations for your project workflows and use the app capabilities for managing attachments. Slight modifications can be added into Java API throughout time.

### Added support for using values of custom fields when setting up access restrictions for categories

Now you can dynamically vary access restrictions for categories depending on values in custom fields. The app supports the following custom field types:

- Group Picker (multiple groups)
- Group Picker (single group)
- User Picker (multiple users)
- User Picker (single user)

## Edit Category Scheme

[← Back to Category Schemes](#)

Scheme name	<input type="text" value="CF: Custom Fields Category Scheme"/>
Image Thumbnail Size	<input type="text" value="200x200px"/> ▼
Display the field on forms as	<input type="text" value="Multiple drop areas"/> ▼

Attachment Category	Issue Types	Access Restrictions	Auto-distribution	Action
<input type="text"/>	<input type="text" value="Choose issue types"/> ▼	<input type="text" value="Start entering users, user groups, project roles or fields"/> ▼		<input type="button" value="Add"/>
⋮ <input type="text" value="Uncategorized"/>		<input type="text" value="Start entering users, user groups or project roles"/> ▼		
⋮ <input type="text" value="Documents"/>	<input type="text" value="Choose issue types"/> ▼	<input type="text" value="Assignee x user"/> ▼		<input type="button" value="Remove"/>
⋮ <input type="text" value="Screenshots"/>	<input type="text" value="Choose issue types"/> ▼	GROUPS jira-software-users		<input type="button" value="Remove"/>
⋮ <input type="text" value="Screencasts"/>	<input type="text" value="Choose issue types"/> ▼	FIELDS		<input type="button" value="Remove"/>
⋮ <input type="text" value="Prototypes"/>	<input type="text" value="Choose issue types"/> ▼	User Picker (multiple users) User Picker (single user)		<input type="button" value="Remove"/>

1. Some custom fields in Jira Service Desk may not be supported due to the Jira Service Desk specifics.
2. The app does not support custom fields provide within our third-party apps.
