

Managing Attachments with Public Java API

Please see our documentation for public Java API available in the Smart Attachments app.

Java API methods are not exposed in Smart Attachments versions older than 2.1.0. Please use [REST API](#) instead.

[View Java API Documentation](#)

Creating a new category scheme with categories

This example illustrates the way to create a new category scheme with the pre-defined set of categories.

Updating configuration of the category scheme

This example illustrates the way to update configuration of the category scheme (issue type visibility, access restrictions, auto-distribution rules).

Associating the category scheme with the project

This example illustrates the way to associate the project to the specific category scheme.

Deassociating the category scheme from the project

This example illustrates the way to remove the association of the project to the specific category scheme.

Moving attachments between categories

This example illustrates the way to move attachments from one category to another within the same issue.

Copying an issue with attachments in categories

This example illustrates the way to copy an issue with attachments and preserve attachments in their categories.

Copying an issue with attachments in categories to another project

This example illustrates the way to copy an issue with attachments in categories to another project with preserving files in categories as in the source issue. This script will work only in projects that are associated with the same scheme.
