

TeamCity Integration for Jira 3.0.0

 Updates in the build indexing mechanism require the complete re-indexation of your TeamCity data.

New in this release

JQL query to [search for issues](#) that relate to a specific build.

Now you can instantly find all the issues that pertain to a specific build by entering the corresponding JQL query.

The screenshot shows the Jira search interface. The search bar contains the JQL query: `issue in issuesRelatedToTeamCityBuild("#221")`. The search results list several issues, with the top one being "SAFC-130: Google Analytics: Tracking File drag-n-drop upload event". A callout box points to the search bar with the text: "JQL QUERY TO LOOK FOR ISSUES" and "Find out all the issues that relate to a specific build number and see them in a list." The details for the selected issue are shown on the right, including the description: "As a PO I want to track the File drag-n-drop upload event, so that I can see whether user directly upload files into the space storages and whether they attach document revisions."

JQL query to [search for issues](#) against the build number which fixes the issue or against the build status (failure or success).

Now you can show only issues with the the successful or failed build status, so that you can view only the relevant information.

The screenshot displays the Jira search interface. The search criteria are "Fixed in Build" IS NOT EMPTY and issue type = Task. The search results list several issues, with SAFC-130 selected. The issue details for SAFC-130 are shown, including its type (Task), priority (Blocker), status (IN REVIEW), and description. A callout box highlights the 'Fixed in Build' field, which shows '#221'. The callout text reads: "ISSUES BY FIXED IN BUILD # OR STATUS Find out issues that were fixed in the specific build or get the list of issues with empty, successful, or failed builds."

The new version of add-on also includes the following features:

- Added the mechanism for storing build-specific information for improving performance of showing it in issues.
- Default indexation depth is limited to 365 days.
- Updated the TeamCity icon used in the app.

Fixed in this release

- Resolved the issue with disappearance of the Return to search button after reloading an issue with the builds in the Issue Navigator.
- Resolved the issue with showing the warning 'The server is unavailable. Please verify the settings of the connection to this TeamCity Server' when none builds are indexed.
