

How to use Handy Button macro

Handy button is a simple macro to create noticeable links on the Confluence pages. You'll get a button on your page which opens a link in the browser when you click it.

1. **Insert** the Handy Button macro on the page.
2. Specify the macro parameters:
 - a. Button label
 - b. Link address or relative reference (start typing the name of the page)
 - c. Button color
 - d. Button width (pixels)
 - If no width is set, it will be determined by the text length
 - If the width is set, the button will be rendered using this width. If the text can't be rendered within a single line due to the width limitation, it will be rendered using multiple lines. The height of the button will increase in this case
3. Click **Insert**.

Insert 'Handy Button' Macro

<p>Button Macro with configurable color and label. Post Idea or Issue. Documentation</p> <p>Label *</p> <input type="text" value="Handy Button"/> <p>Page title or URL *</p> <input type="text" value="How to use Handy Button macro"/> <p>Color *</p> <input type="color" value="Yellow"/> <p><input checked="" type="checkbox"/> Open in a new tab</p> <p>Width</p> <input type="text" value="200"/>	<p> Preview</p> <div data-bbox="636 760 945 808"><p>Handy Button</p></div>
