

No Email Storm 2.0.0

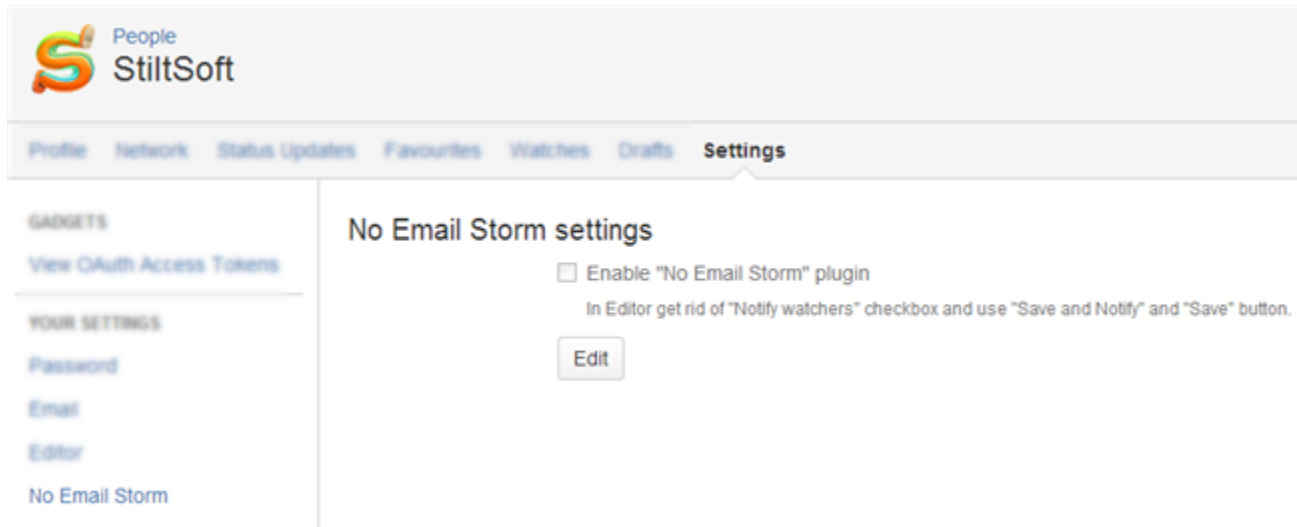

StiltSoft is happy to announce the release of No Email Storm for Confluence 2.0.0

What's new

Version 2.0.0 doesn't require the Speakeasy extension to be installed.

Get Rid of Speakeasy

This version works perfectly without Speakeasy. Admins still can enable No Email Storm for certain groups and individual users can enable/disable it in their profile settings. The version is compatible with Confluence versions 4.3 - 5.3.

The screenshot shows a user profile page with the StiltSoft logo and navigation tabs. The 'Settings' tab is active, displaying the 'No Email Storm settings' section. A checkbox for 'Enable "No Email Storm" plugin' is present, with a note below it: 'In Editor get rid of "Notify watchers" checkbox and use "Save and Notify" and "Save" button.' An 'Edit' button is located below the checkbox. The left sidebar contains sections for 'GADGETS' and 'YOUR SETTINGS', with 'No Email Storm' listed under the latter.
