

Collapsing of Long Comments and Discussions

A Talk discussion collapses automatically if it's:

- a long discussion, which in its expanded state prevents another talk from positioning next to its icon;
- a single long discussion on a Confluence page and its length exceeds the page length.

The screenshot shows a vertical list of two comments by Peter Jacobs. The first comment, dated Feb 02, 2015 17:19, reads: "Talk is a powerful commenting tool for quick team collaboration." Below it is a blue link that says "Show 2 more replies". The second comment, dated Feb 02, 2015 17:21, reads: "You can vote for this feature in our Feedback system." Each comment is preceded by a small profile picture icon.

When a collapsed discussion consists of 3 or more comments, you can see its first and last comments, as well as the number of hidden comments.

To expand a collapsed discussion:

- select that discussion, or;
- click 'Show X more replies', or;
- click the related Talk icon.

A Talk comment collapses automatically if it's:

- a long comment that is a part of a collapsed Talk discussion;

To expand a collapsed Talk comment:

- select that comment, or;
- click the related Talk icon.

If it's a part of a collapsed Talk discussion, your collapsed comment expands automatically once that discussion gets active.

In active Talk comments and discussions you can use the 'Show less' and 'Show more' buttons to collapse and expand long comments.
