Managing Free Text Filters

Table Filter for Confluence add-on is equipped with the free text filters. You can add this filter type for any column of your table. It allows you to enter text queries for filtration of data in the selected column of your table. You can also enter the regular expressions for flexible data filtration in the column.

Adding the Free Text Filter

1. Edit the page.
2. [Insert the Table Filter macro](#) and paste the table within the macro body.
3. Select the macro and click **Edit**.
4. In the **Free text filter columns** box, select the columns for filtration with free text filters.
5. Save the macro.
6. Save the page.

Filtering the table with free text filters

1. Open the page with the table for filtration.
2. On the filtration pane, locate the free text filters and position the mouse pointer within the appropriate one.
3. Enter the appropriate query or regular expression for filtration.

You can also filter tables with @-user mentions by the current user (write or select **@currentUser**).

Transaction ID	Transaction Amount	Fee Amount	Transaction Type	Service Agent	Transaction Date	Customer Type	Transaction Status	Customer ID	Card Type	Payment Method	Store

Using regular expressions

You can use JavaScript-style regular expressions in free text filters.

Regular Expression	Matched Values
[Dd]oe	Doe, doe
colo(u)?r	color, colour
Developer Scientist	Developer, Scientist

Table Filter macro uses the **OR** operator for table filtration. You can use the **AND** operator in the free text and global filters. Enter the **&** ('ampersand') between values to match two or more values in the cell at once.

The full list of regular expressions is available [here](#).

Free text filters allow you to use regular expressions while filtering table data. They allow you to write powerful filtration queries.

Quick Recipes with Regular Expressions

Regular Expression	Explanation	Example														
<code>\d\d</code>	This query will look for two digits separated by the point (for example, '8.1', '9.5'). Entries with more than one digit after the point will be also included.	<p>If applying the <code>\d\d</code> query to the Operating System column, you will get three values with 'OSx 5.7', 'cOS 7.2' and 'aOS 2.8' after filtration.</p> <table border="1"> <thead> <tr> <th>User</th> <th>Operating System</th> </tr> </thead> <tbody> <tr> <td>Mike</td> <td>OSx 5.7</td> </tr> <tr> <td>Jane</td> <td>SuperOS</td> </tr> <tr> <td>Stewart</td> <td>OSx 9</td> </tr> <tr> <td>Jane</td> <td>cOS 7.2</td> </tr> <tr> <td>Andy</td> <td>aOS 2.8</td> </tr> </tbody> </table>	User	Operating System	Mike	OSx 5.7	Jane	SuperOS	Stewart	OSx 9	Jane	cOS 7.2	Andy	aOS 2.8		
User	Operating System															
Mike	OSx 5.7															
Jane	SuperOS															
Stewart	OSx 9															
Jane	cOS 7.2															
Andy	aOS 2.8															
<code>\d\d:\d\d:</code>	You can use this query if you want to filter dates having time and dates without time.	<p>If applying the <code>\d\d:\d\d:</code> query to the Sync Time column, you will get three values with '11/17/2015 10:35:58', '11/17/2015 12:24:54' and '11/19/2015 16:47:22' after filtration.</p> <table border="1"> <thead> <tr> <th>User</th> <th>Sync Time</th> </tr> </thead> <tbody> <tr> <td>Mike</td> <td>11/17/2015 10:35:58</td> </tr> <tr> <td>Jane</td> <td>11/28/2015</td> </tr> <tr> <td>Stewart</td> <td>11/17/2015 12:24:54</td> </tr> <tr> <td>Jane</td> <td>11/30/2015</td> </tr> <tr> <td>Molly</td> <td>11/16/2015 17:28</td> </tr> <tr> <td>Andy</td> <td>11/19/2015 16:47:22</td> </tr> </tbody> </table>	User	Sync Time	Mike	11/17/2015 10:35:58	Jane	11/28/2015	Stewart	11/17/2015 12:24:54	Jane	11/30/2015	Molly	11/16/2015 17:28	Andy	11/19/2015 16:47:22
User	Sync Time															
Mike	11/17/2015 10:35:58															
Jane	11/28/2015															
Stewart	11/17/2015 12:24:54															
Jane	11/30/2015															
Molly	11/16/2015 17:28															
Andy	11/19/2015 16:47:22															
<code>^[0-9]{2}\$</code> <code>^[0-9]{3}\$</code>	You can use these queries if you want to filter people by age depending on the number of digits.	<p>If applying the <code>^[0-9]{2}\$</code> query to the Age column, you will get three numbers comprised of two digits.</p> <table border="1"> <thead> <tr> <th>User</th> <th>Age</th> </tr> </thead> <tbody> <tr> <td>Mike</td> <td>120</td> </tr> <tr> <td>Jane</td> <td>75</td> </tr> <tr> <td>Stewart</td> <td>57</td> </tr> <tr> <td>Jane</td> <td>111</td> </tr> <tr> <td>Molly</td> <td>85</td> </tr> </tbody> </table>	User	Age	Mike	120	Jane	75	Stewart	57	Jane	111	Molly	85		
User	Age															
Mike	120															
Jane	75															
Stewart	57															
Jane	111															
Molly	85															
<code>\b([1-1][1-1])</code> <code>\b([1-1][2-2])</code> <code>\b([1-1][3-3])</code> and so on	You can use this query if you have a list with timestamps and you would like to see how many operations were performed at a particular hour,	<p>If applying the <code>\b([1-1][1-1])</code> query to the Login time column, you will get three entries of login attempts.</p> <table border="1"> <thead> <tr> <th>User</th> <th>Login Time</th> </tr> </thead> <tbody> <tr> <td>Mike</td> <td>11:30:25</td> </tr> <tr> <td>Jane</td> <td>13:31:25</td> </tr> <tr> <td>Stewart</td> <td>11:32:25</td> </tr> <tr> <td>Jane</td> <td>12:40:25</td> </tr> <tr> <td>Molly</td> <td>11:47:25</td> </tr> <tr> <td>Stewart</td> <td>12:20:25</td> </tr> </tbody> </table>	User	Login Time	Mike	11:30:25	Jane	13:31:25	Stewart	11:32:25	Jane	12:40:25	Molly	11:47:25	Stewart	12:20:25
User	Login Time															
Mike	11:30:25															
Jane	13:31:25															
Stewart	11:32:25															
Jane	12:40:25															
Molly	11:47:25															
Stewart	12:20:25															

<p>h(n a)s</p>	<p>You can use this query if you want to filter last names having either 'n' or 'a' between h and s.</p>	<p>If applying the 'h(n a)s' query to the Last Name column, you will get four entries (Johns, Johnston, Johnson and Johason).</p> <table border="1" data-bbox="868 205 1156 617"> <thead> <tr> <th>First Name</th> <th>Last Name</th> </tr> </thead> <tbody> <tr> <td>Alexander</td> <td>Johns</td> </tr> <tr> <td>John</td> <td>Johnston</td> </tr> <tr> <td>Mike</td> <td>Johney</td> </tr> <tr> <td>Alice</td> <td>Johnson</td> </tr> <tr> <td>Pavel</td> <td>Johason</td> </tr> <tr> <td>Jane</td> <td>Johannesen</td> </tr> <tr> <td>Jannet</td> <td>Johndrow</td> </tr> <tr> <td>Paul</td> <td>Johnting</td> </tr> </tbody> </table>	First Name	Last Name	Alexander	Johns	John	Johnston	Mike	Johney	Alice	Johnson	Pavel	Johason	Jane	Johannesen	Jannet	Johndrow	Paul	Johnting
