

Customer Case - 7/5/2016

New in this release

The new version of add-on includes the following feature:

- Updated behavior for ideas or tickets migrated between JIRA projects used as forums. Now if the idea/ticket is migrated between forums, all its metadata (including votes and watchers) is preserved and moved from one forum to another forum. All the related links are updated in Customer Case. If the idea or ticket is migrated from the forum to the JIRA project not used as a forum, all the related meta data is just removed from the forum and Customer Case.

Fixed in this release

- Resolved the issue with showing the incorrect count of comments in Customer Case after removal of comments in JIRA Cloud.
