

Table Filter and Charts 6.3.0

New in this release:

Added a new macro - [Table from JSON](#).

The macro allows you to output a table from a JSON data source.

Edit 'Table from JSON' Macro

Imports table from JSON data source.
Post [Idea](#) or [Issue](#). [Documentation](#)

JSON source *

- Attachment
- URL
- Attachment table data**

Added autodetection of filter type and date format when adding filters in the page view mode.

Fixed in this release:

- Resolved the issue when applying Table Filter totals to the Pivot Table macro.
- Resolved the issue with exporting charts with special characters in labels to PDF.
