

Table Filter and Charts 5.2.0

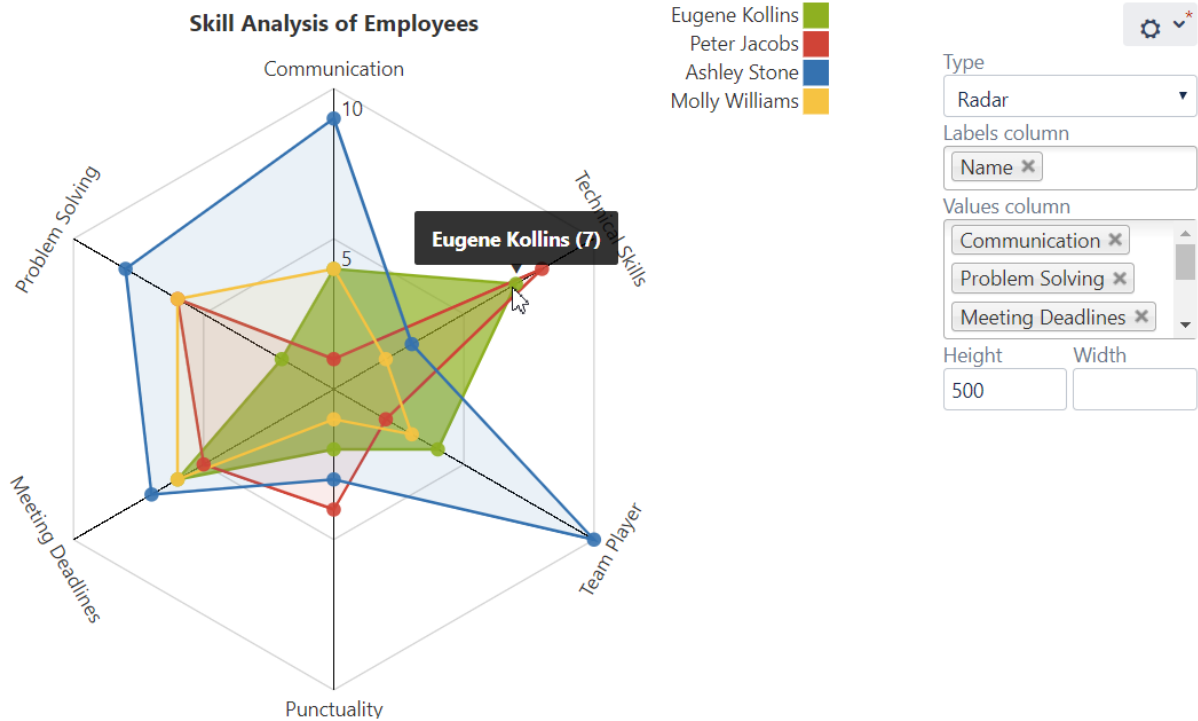

New in this release:

Added a new chart type to the Chart From Table macro - Radar (Spider) chart.

The chart displays multivariate data in the form of a two-dimensional chart of three or more quantitative variables. The chart can be applied to sort the variables into relative positions that reveal distinct correlations, trade-offs, and a multitude of other comparative measures.

Radar Chart

Version 5.2 also includes the following features:

- Added compatibility with the [Scroll Viewport](#) app.
- Improved displaying of a table merged with the help of the Table Transformer macro.
- Added support for dates outputted with the help of the [Page Info for ScriptRunner](#) app.
- Added compatibility with icons and images when using the [Totals for columns: Count not empty](#) option type.
- Added responsiveness of table columns when hiding columns with the help of the Table Filter macro.
- Added the ability to set the date and time format when calculating periods of time with the help of the Table Transformer macro.
- Added preserving of the default values formatting when calculating Total row/column.
- Added the ability to display values with postfix and prefix (for example, \$1,000) in the Pivot Table and Chart from Table macros.
- Added preserving of the default formatting when using the Literal operation type and the Cell value delimiter option in the Pivot Table macro.

Fixed in this release:

- Resolved the issue with using the app with the [Scroll Word Exporter](#) app version 4.x and the [Include Page](#) macro.
- Resolved the issue with export to PDF when the Table Filter macro is wrapped in the [Deck of Cards](#) macro.
