

Customer Case - 8/16/2018

New in this release

Added support for custom fields that can be shown on the request creation form.

Now you can add custom fields on the request creation form and collect all the required information for issue diagnostics.

The screenshot shows the 'Create a request' form in the Customer Support Forum. The form includes a 'Summary' field with the text 'The application does not load after the restart', a 'Description' field with a rich text editor containing 'Hi Team! I have performed the maintenance restart of the application and now it does not load. Please advise.', a 'Severity Level' dropdown set to 'Critical', an 'Application Version' text field with '2.5.7', and a 'Database' dropdown set to 'PostgreSQL'. A blue callout box with the text 'SHOW CUSTOM FIELDS ON FORMS' and 'Display the required custom fields on the request creation form and collect information for issue diagnostics' points to the 'Application Version' field. The form also features a 'Create' button, a 'Cancel' button, and an attachment area with the text 'Drop files to attach, or browse'.

Added support for the automatic request re-opening upon the receiving of a new comment from customer.

Now your requests can be automatically reopened when you a new comment is posted by the customer for closed requests.
