Table Filter and Charts 3.4.0
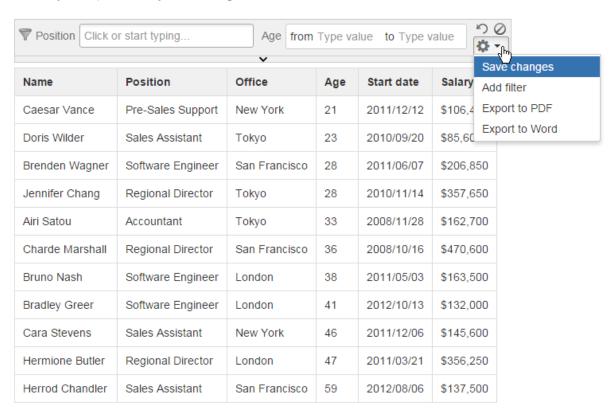

New in this release

Updated design of the filtration pane and management of actions.

Now you can manage filters in the page view mode much more efficiently than ever before.

Employee List

Created by StiltSoft, last modified just a moment ago

The new version of add-on includes the following features:

- Added a capability to save the settings of the filtration pane after removal of all filters in the page view mode.
- Added a capability to filter by the currently logged in users when using the @-mentions in Confluence.
- Disabled the hiding of the filtration or management pane when hiding the source table on the page.

Fixed in this release

- Resolved the issue with inclusion of values from the adjacent column when filtering the table column containing merged cells.
- Resolved the issue with the non-showing of negative values on the column charts.
- Resolved the issue with adding a line break when adding a blank table into the Table Filter macro.
- Resolved the issue with the disappearance of the horizontal scroll bar when using a wide large table with the activated option to fit the table to the screen area.
- Resolved the issue with the continuous display of the pane for managing the Table Chart macro after changing the operation type for the Pivot Table macro.
- Resolved the issue with hiding columns in the table containing other tables. The issue caused problems with the markup of tables stored within the master table.
