Talk for Confluence 3.1.1

Fixed in this release

- Fixed the issue with links autocomplete. The bug caused the following misbehavior. When adding a link to a Confluence page in a Talk comment by pressing '[' and starting typing the Confluence page title, the text color of the highlighted page suggestion was black instead of being white.
- Fixed the bug with the 'Favourite talks' tab in user profile. An empty 'Favourite talks' page was being displayed when viewing a profile of another user. Now this tab is shown only when a user views his/her own profile.
- Fixed the issue with Talk links. The issue caused the following misbehavior. When a Talk comment was added inside some link on a page, that link was being opened (instead of a Confluence page with a talk comment) when following the Talk link, e.g. by clicking 'View online' in an email notification.
