TeamCity Integration for JIRA 2.3.0

New in this release

Added the TeamCity Build Configurations gadget that you can display on the JIRA dashboard.

Now you can instantly view the recently completed builds, their status and duration. Additionally, you can remotely trigger builds on TeamCity server and seamlessly transition to TeamCity to view details on the recent builds of the specific build configuration. For details, see this page.

The new version of add-on also includes the following features:

- Added a capability to reindex data for each TeamCity server independently.
- Added display of data indexation percentage for each TeamCity server individually.
- Added output of the project on the TeamCity tab for individual builds related to the currently opened JIRA issue.
