Table Filter and Charts 9.0.0

New in this release:

- Added new refined macro browser for Table Filter.
- Added new currency format for Table Spreadsheet (i.e. 1.000.000,02 €).

Fixed in this release:

- Resolved the issue of the incorrect PDF page export with Table Filter with no active filters set.
- Resolved the issue with Data Verification feature of Table Spreadsheet.
- Resolved the typo issue with German localization of Table Filter.
- Resolved the issue of excessive table caching with a single complex Jira macro.
- Resolved the issue with the DATEDIFF function in Table Spreadsheet.
- Resolved the issue of the AVERAGE function working inconsistently with empty cells in Table Spreadsheet.
- Resolved the issue of Filtration panel not working in the edit mode when adding new filters in the macro browser.
- Resolved the issue of filters drag-and-drop not working in the edit mode with filters set in column headers or hidden.
