Table Filter and Charts 3.6.3

Fixed in this release

- Resolved the issue with filtration of date stamps on pages when filtration is performed by users having different locales on their machines.
- Resolved the issue with the non-working default values for the icon filter.
- Resolved the issue with the hiding of a newly added table row in the filtered table after inserting @-mention, link or inserting any text snippet into this row.
- Resolved the issue with the incorrect selection of the table and table cell merging if the table with merged cells is inserted within the Table Filter macro.
