

Table Filter and Charts 3.6.7

New in this release

The new version of add-on includes the following features:

- Improved compatibility and performance with Glossary add-on.
- Improved compatibility with JIRA Issue macro and optimized data load from the server.

Fixed in this release

- Resolved the issue with filtration of the table in Confluence editor if the filter is added for the column without the name.
- Resolved the issue with the incorrect or failing filtration of the tables with the missing cells.
- Resolved the issue with the abnormal page loading on new versions of Confluence.
- Resolved the issue with the partial output of the table with the fixed column width in the page view or edit modes when the Fit table to screen area option is enabled.
- Resolved the issue with the non-working column sorting when the Table Filter with the table was placed within the page layout.
- Resolved the issue with the missing file extension when exporting content of macros to PDF in Internet Explorer 11.
- Resolved the issue with incorrect data filtration when copying and pasting the table column.
- Resolved the issue with incorrect display of the chart legend overlapping the source table in Internet Explorer 11.
- Resolved the issue with the disappearance of the last column in the fixed-width table when enabling the automatic row numbering option in Confluence 5.10.
