Smart Attachments 1.13.0

New in this release

Added support for workflow conditions automating verification of attachments.

Now you can add conditions that will automatically check presence of attachments in the specific category or attachments uploaded by the specific user, user group or project. Depending on the availability, the user will or will not be able to execute transition to the next workflow step.

Workflows / JIRA-copy (Draft)

  All of the following conditions ▾   Add condition

    All of the following conditions ▾   Add condition

    The transition can be executed if the file uploaded is from the group **jira-developers** .

    Uploader has the **Business Analysts** project role.

  The transition can be executed if the file uploaded is from the group **jira-users** .

Checks that the category **Documents** is not empty. Filter: **doc, pdf, App**.

Checks that the category **Screenshots** is not empty.

Added support for workflow post functions automating execution of routine tasks on attachments.
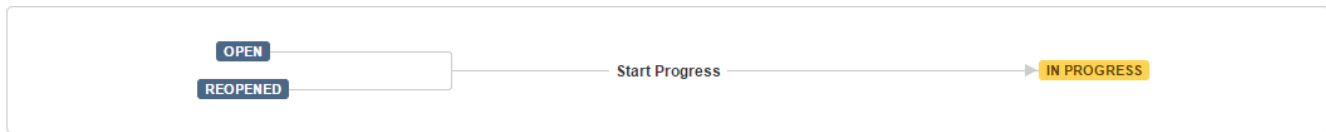

Now you can automatically delete or move attachments from the specific category, or email them to the required colleagues or business contacts of yours.

The following will be processed after the transition occurs   Add post function

1. Delete attachments from categories: **Draft Design**.

2. **App Design Email** - Send attachments to: **ruddick@mail.ru; lstenfer@yahoo.com;** . From categories: **Documents**. Filter: **App**.

3. Move attachments from category **Screenshots** to category **Documents**.

4. Move attachments from category **Documents** to category **Logs**. Filter: **log**.

5. The **Resolution** of the issue will be **cleared**.

6. Set issue status to the linked status of the destination workflow step.

7. Assign the issue to the current user.

8. Add a comment to an issue if one is entered during a transition.

9. Update change history for an issue and store the issue in the database.

10. Re-index an issue to keep indexes in sync with the database.

11. Fire a **Work Started On Issue** event that can be processed by the listeners.

The new version of add-on also includes the following feature:

- Improved the Category is not Empty validator and added verification of attachment name by name pattern or regular expression.

Fixed in this release

- Resolved the issue with the opening the confirmation form when deleting a document revision.
- Corrected behavior of removing attachment ID's in the database after performing the bulk operation.
