# InPlace Editor 3.0.5

New in this release

- Adjusted the click area for headings to fit the area of the heading titles, which reduced the false clicks in the adjacent areas.
- Modified the default behaviour of the add-on to load more content on pages with multi-level headings.

Fixed in this release

- Resolved the issue with selection of heading levels when configuring space settings.

- Resolved the issue with showing "Wysiwyg content" text in the editor instead of expected content in some cases.
- Improved compatibility with Refined Theme for Confluence.
