TeamCity Integration for JIRA 2.5.0

New in this release

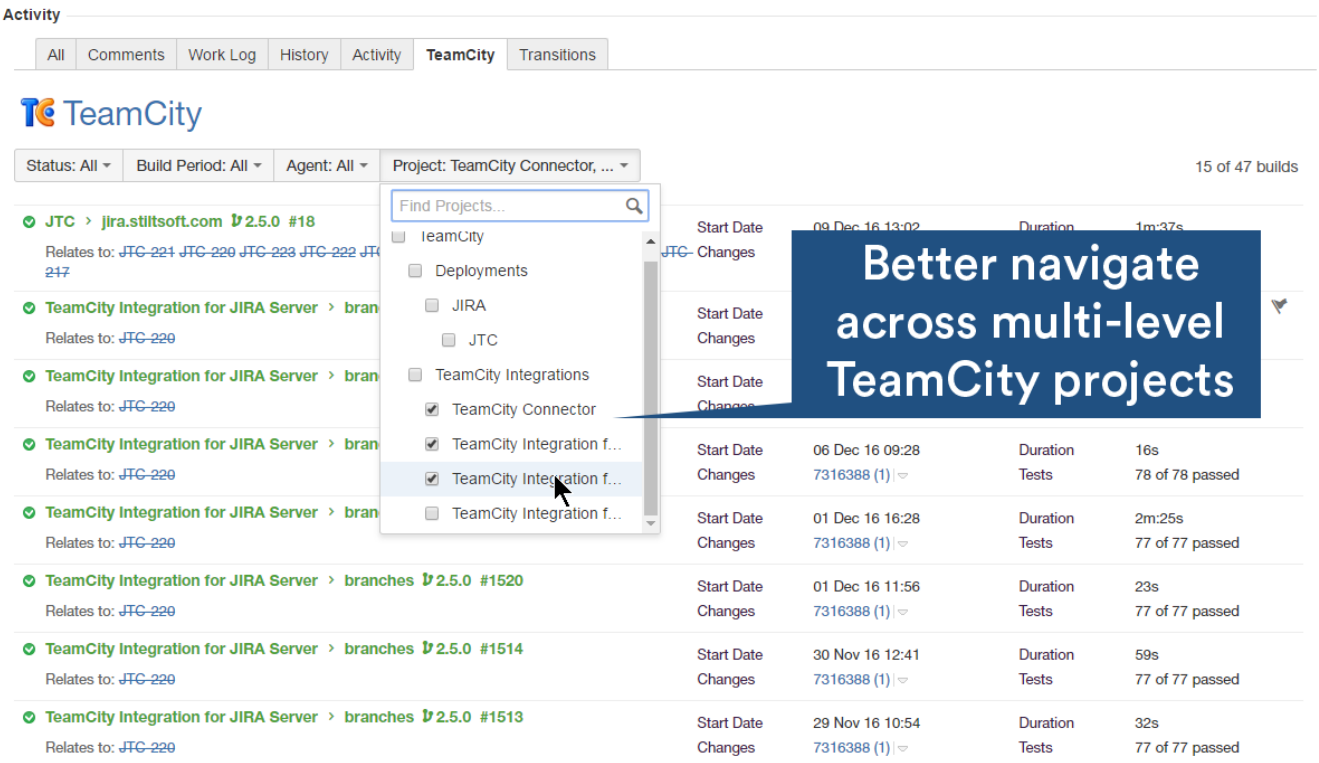

Improved the way of creating application links to TeamCity servers.

Now you can much more quickly create application links to TeamCity servers.

Improved the display of multi-level projects when filtering builds, configuring gadgets and custom fields.

Now you can better navigate across multi-level projects and select only the ones you need.

Fixed in this release

- Resolved the issue with the persistent display of the message about the ongoing indexation when there are no builds on TeamCity server.
- Corrected the mechanism of caching related builds and resolved the issue with the incorrect parsing of issue keys after modifications on TeamCity servers.
