

TeamCity Integration for JIRA 2.5.0

New in this release

Improved the way of creating [application links](#) to TeamCity servers.

Now you can much more quickly create application links to TeamCity servers.

The screenshot displays the JIRA Administration interface. On the left, the 'Administration' sidebar is visible with sections for 'Applications', 'Projects', 'Issues', 'Add-ons', and 'Users'. Under 'Applications', 'TeamCity Servers' is highlighted. The main content area shows the 'Edit TeamCity server' dialog box. The dialog has fields for 'Name' (TeamCity StiltSoft), 'URL' (https://tc.stiltsoft.com/), 'Username' (tc-admin), and 'Password' (masked with dots). Below these fields, a 'Test connection' button is present, and a message states: 'Connection to TeamCity has been successfully established. TeamCity 10.0 (build 42002) is used.' The dialog also includes 'Save' and 'Close' buttons. A blue callout box with white text is overlaid on the bottom right of the dialog, stating: 'Create direct application links to TeamCity servers'.

Improved the display of multi-level projects when filtering builds, configuring gadgets and custom fields.

Now you can better navigate across multi-level projects and select only the ones you need.

Better navigate
across multi-level
TeamCity projects

Fixed in this release

- Resolved the issue with the persistent display of the message about the ongoing indexation when there are no builds on TeamCity server.
- Corrected the mechanism of caching related builds and resolved the issue with the incorrect parsing of issue keys after modifications on TeamCity servers.
