

Table Filter and Charts 3.9.2

Fixed in this release

- Resolved the issue with the coloring of the filtered table rows, when the adjacent rows out of filtration results are also colored.
- Resolved the issue with the duplication of the table header when having the combination of the Table Filter and Page Properties Report macros on the page with the enabled Fit table to screen area option.
- Resolved the issue with the corruption of the table with the enabled Fit table to screen area option in Confluence 6 editor when loading the page draft version.
- Resolved the issue with exporting data to CSV in Safari.
- Resolved the issue with the failed update of the date format in the page view mode if dynamic date periods are used.
- Resolved the issue with the abnormal expansion of the table width until it fits the full length of text string placed in the cell. The issue occurred when multiple lines of text were placed in the cell.
