

TeamCity Integration for JIRA 2.5.1

New in this release

The new version of add-on includes the following features:

- Increased the delay for hiding the section with build changes after removing the focus from the section while moving the mouse pointer.
- Changed the way of displaying the build duration for the builds created within less than a second. Now they are displayed as '< 1s' instead of '0s'.

Fixed in this release

- Resolved the markup issue with the column overlapping on small screens (13in and less) when viewing the TeamCity section in the project view with the expanded sidebar.
