TeamCity Fixed in Build **Original:** Build #63 [139777]   **New:** Build #62 [139776]

In this version, we've updated the app to generate records in the History and Activity tabs when automatically populating the Custom field. These records will be displayed as authored by TeamCity. Previously, the entries in the History and Activity tabs, as well as the Issue updated events, were generated only when a build was manually selected for the Custom field.

Please note that events will appear only when receiving builds from TeamCity, and not at the time of changing the field configuration.
