

TeamCity Integration 3/23/2017

New in this release

Added the Getting Started wizard for quick add-on setup after installation.

Now you can quickly establish connection to your TeamCity server and find out the add-on capabilities.

The screenshot displays the JIRA Administration interface. The top navigation bar includes the JIRA logo, a menu icon, and links for Dashboards, Projects, Issues, Boards, Forums, and a Create button. A search bar and user profile icon are also present. Below the navigation bar, the 'Administration' section is active, with a search bar for JIRA admin and a 'Back to project: Feedback Three' link. The left sidebar lists various administration categories: Application access, JIRA SOFTWARE (with sub-links for configuration and Labs), JIRA SERVICE DESK (with sub-links for Configuration and Email requests), JIRA CORE (with sub-link for Core Labs), and INTEGRATIONS (with sub-links for Application links, DVCS accounts, HipChat, and FishEye). The main content area features a wizard for adding a TeamCity server. It includes an illustration of three people working at a laptop, a title 'View the required build information in JIRA at once', a description of the integration process, and a 'Add TeamCity server' button with a 'Learn more' link.
