Talk for Confluence 3.3.5

Fixed in this release

- Fixed the compatibility with Internet Explorer. The issue caused problems with inserting and resolving Talk comments.
- Added a new keyboard shortcut for inserting talks in the editor – Ctrl+Alt+C (⌘+Alt+C for macOS users). The keyboard shortcut that was used before (Ctrl+Alt+D) didn't work on macOS devices. The previous keyboard shortcut is still supported – you can insert talks using either old or new keyboard shortcut.
