Table Filter and Charts 3.10.5

New in this release

The new version of add-on includes the following features:

- Improved the way of showing large number values in the bar and column charts.
- Improved the mechanism of calculating totals for worklogs and time periods.
- Improved the way of decreasing the font size on pie and donut charts upon small chart dimensions.

Fixed in this release

- Resolved the issue with the processing of both the pivot table and source data for chart generation when using the combination of macros (Chart from Table > Pivot Table > Table Excerpt).
- Resolved the issue with duplication of aggregated data values for generating a chart when changing data orientation in the chart settings.
- Resolved the issue with the incorrect summarization of X-axis values of the line chart when there are multiple values for one X-axis value.
- Resolved the issue with filtration of statuses in the page edit mode.
- Resolved the issue with the incorrect mechanism of collapsing or expanding levels of the multi-dimensional pivot table when aggregating the table produced by JIRA Issue macro.
- Resolved the issue with unavailability of selection of the column with empty values when building a chart on the basis of a pivot table.
- Resolved the issue with the freezing of table columns or rows in Mozilla Firefox 45.
- Resolved the issue with the incorrect sorting of date values (columns) in the pivot table.
- Resolved the issue with display of the additional scroll bar in the table with the frozen columns or rows when placed in the page sections.
