

Smart Attachments 1.16.0

New in this release

Added a capability to **attach files to multiple categories at once on transition forms**.

Now you can attach files to multiple categories when creating new issues, transitioning to specific statuses, or just attaching files through the standard Attach Files form.

Cancel

Added a capability to **convert the already attached files into document revisions**.

Now you can quickly convert the already attached files into document revisions and keep them under the parent document.

The new version of add-on also includes the following features:

- Added the confirmation form when disabling Smart Attachments add-on for a specific project.
- Added the mechanism that tracks usage of workflows automations (conditions, validators, post-functions) through Google Analytics.

Fixed in this release

- Resolved the issue with sending attachment comments to the ticket reporter (customer) in JIRA Service Desk.
