Table Filter and Charts 3.10.7

New in this release

The new version of add-on includes the following features:

- Added display of separate values (if the cell value delimiter is defined) when setting default values for dropdown filters.
- Added the automatic downscaling of number values in the small sectors of pie charts.
- Added support for sorting of statuses in the page edit mode.
- Adjusted the width of the column with row numbers for the tables generated by Pocket Query.
- Updating naming for the reverse filter.

Fixed in this release

- Resolved the compatibility issue occurred when using the Table Excerpt macro with dynamic tables.
- Resolved the issue with disappearance of the table with the frozen rows in the page preview mode.
- Resolved the issue with the reset of the row and column colors (defined through Table Plus macro) in the table with the frozen rows or columns.
- Resolved the issue with the incorrect display of the table with the frozen rows when setting more than 15 rows for freezing.
- Improved the display of value hints when hovering over sectors of pie charts.
- Resolved the issue with a capability to enter the same column name multiple times when configuring a chart.
