

Talk for Confluence 3.4.0

New in this release

- Adding Images to Comments.

Fixed in this release

- Fixed compatibility with Confluence 5.1
- Fixed the issue that sometimes caused errors while adding comments when viewing a page.

Adding Images to Comments

Before you could mention an image in a comment by [adding a link](#) to it. Now you can drag-and-drop an image into a comment field.

The screenshot shows the 'Set up Quizzes' page in Confluence. A comment box for user Katerina Kolina is open, displaying the text 'Let's add this screenshot here'. A green callout bubble points to the comment box with the text 'Drag-and-drop an image to add it to a comment'. The background page shows quiz settings and a 'Workplace Safety' quiz with 20 questions. The quiz question is 'Which of the following should you NOT do when lowering a load?' with options: 'Twist your body', 'Keep the load close to your body', 'Bend your knees', and 'All of the above'.

When you do that, an image will be attached to the page and shown in the comment after saving it.

The screenshot shows the same 'Set up Quizzes' page. The comment box for user Katerina Kolina now displays a screenshot of the 'Workplace Safety' quiz page. A green arrow points to the screenshot in the comment. The comment text is 'Let's add this screenshot here'. Below the screenshot, there is a 'Write a comment...' text field. The background page remains the same, showing quiz settings and the 'Workplace Safety' quiz.
