

Smart Attachments 1.17.2

This version of the app contains modifications in the data structure, so there is no backward compatibility with the older versions of the app. Please consider this while updating to this app version.

New in this release

Added an option to select the look of the attachment field.

Now you can display multiple drop areas for each category or show a single drop area with the category selection box on all transition forms.

 Smart Attachments ?

Here you can [define categories](#) for your attached files. Categories will allow you distribute attachments among the appropriate categories for easier access to these files. The added categories will become available in the Attachments section. You can drag files to the appropriate category for storing within it. You can [reindex attachments](#) in the add-on administration section.

Enable Smart Attachments for project ☒
