# Table Filter and Charts 4.1.0

## New in this release

**Added an option to enable the inline macro insertion for users and groups.**

Now you can enable the block with the icons for inline macro insertion in the page view mode for specific users and groups.

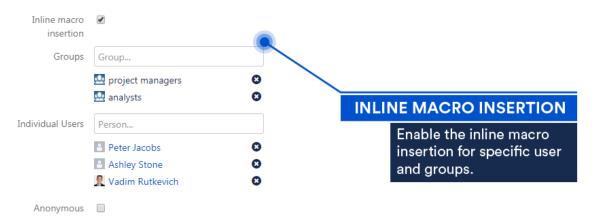

The new version of add-on also includes the following features:

- Added an option to enable/disable inline macro insertion into the user profile.
- Added calculation of the first column if it contains the number.
- Added a capability to pick the color for the milestone without a title.
- Added a capability to rename the Total column.
- Added a new operation type - multiplication.
- Added a new operation type - count values.
- Improved the display of names of milestone on the Gantt chart so they do not overlap each other.
- Added the trendline for the column/bar charts.

## Fixed in this release

- Resolved the issue with aggregation of data by day.
- Resolved the issue with failing on an invalid html markup of a table.
- Resolved the issue with resetting colors when saving Chart from Table macro changes with JIRA Issues macro before the macro preview is available.
- Improved performance of the CSV export.
