Talk for Confluence 3.7.0

Migration

When you update the app to v.3.7.0, migration will take place. It shouldn't take more than 10-30 minutes. The app will not be available during the migration. That is why it is recommended to **plan the update for off-work hours**.

Downgrading

It is recommended **not to downgrade** after updating to v.3.7.0. The v.3.7.0 changes the way Talk data is stored. If you update the app to v. 3.7.0 and then downgrade to an older version, Talk comments created on v.3.7.0 will not be available in Confluence UI after the downgrade. This data will remain in the database, but will be available in Confluence only after updating to v.3.7.0 and above.

Moreover, Talk comments created after the downgrade will not migrate after updating to v.3.7.0 or above.

If you have any questions or need assistance, please contact Talk Support.

New in this release

- Changes in app architecture to improve performance.
