

# TeamCity Fixed in Build

 This feature is available for **Jira Server** only.

On this page:

- [Adding a Custom Field](#)
- [Configuring the Custom Field](#)

Starting from version **2.4.0**, TeamCity Integration for Jira add-on allows you to [track the build number](#) for fixed issues. It allows you to define the build that fixes the issue or adds the feature reported in the Jira issue.

Before proceeding to configuration of this custom field, please refer to the documentation about [management of custom fields](#) in Jira.

## Adding a Custom Field

1. Navigate to **Administration > Issues > Fields > Custom Fields**.
2. Click **Add Custom Field**.
3. In the **Select a Field Type** form, switch to view all custom fields and enter 'TeamCity' into the search field.

Select a Field Type

All

Standard

Advanced

TC TeamCity

**TeamCity Build Runner**

A custom field that allows you to run a build in TeamCity manually.

TC TeamCity

**TeamCity Fixed in Build**

A custom field that shows the number of TeamCity build which resolves the JIRA issue.

Issue type(s):  
Global (all issues)

Default value: [Edit Default value](#)

4. Here define the parameters for population of the Fixed in build field with the relevant builds, as follows:
  - a. **Selection Criteria** - choose the appropriate way of selecting builds, as follows:
    - i. Single build (one against multiple build configurations).
    - ii. Multiple builds (one against each build configuration).
  - b. **Build Tracking** - select the appropriate option for populating the Fixed in Build field, as follows:
    - i. **Most recent build (successful or failed)** - the add-on populates the field automatically with the number of the recent successful or failed build.
    - ii. **Most recent successful build** - the add-on populates the field automatically with the number of the recent successful build number.
    - iii. **First successful build** - the add-on populates the field automatically with the number of the first successful build.
    - iv. **First build (successful or failed)** - the add-on populates the field automatically with the number of the first successful or failed build.
    - v. **Manual** - the user can select the appropriate build number. The build number is not assigned automatically if using this option.
5. Add one or multiple builds configurations for the field population.

Set Custom Field Defaults ?

Set the default value for custom field: Fixed in Build

Selection Criteria ☒ Single build (one against selected build configurations)  
☐ Multiple builds (one against each build configuration)

Build Tracking ☐ Most recent build (successful or failed)  
☐ Most recent successful build  
☒ First successful build  
☐ First build (successful or failed)  
☐ Manual
