

# TeamCity Integration for Jira 3.0.0

Updates in the build indexing mechanism require the complete re-indexation of your TeamCity data.

## New in this release

**JQL query to [search for issues](#) that relate to a specific build.**

Now you can instantly find all the issues that pertain to a specific build by entering the corresponding JQL query.

The screenshot shows the Jira Search interface. The search bar contains the JQL query: `issue in issuesRelatedToTeamCityBuild("#221")`. A blue arrow points from this query to a callout box that says: "JQL QUERY TO LOOK FOR ISSUES" and "Find out all the issues that relate to a specific build number and see them in a list." The search results list several issues, with SAFC-130 selected. The details for SAFC-130 are shown on the right, including the title "Google Analytics: Tracking File drag-n-drop upload event", priority "Blocker", and status "Unresolved".

**JQL QUERY TO LOOK FOR ISSUES**

Find out all the issues that relate to a specific build number and see them in a list.

**JQL query to [search for issues](#) against the build number which fixes the issue or against the build status (failure or success).**

Now you can show only issues with the the successful or failed build status, so that you can view only the relevant information.

The screenshot shows the Jira web interface. At the top, there's a navigation bar with 'Jira', 'Dashboards', 'Projects', 'Issues', 'Boards', and a 'Create' button. A search bar is on the right. On the left, there's a sidebar with 'New search' and 'Find filters'. The main area shows a search filter: '"Fixed in Build" IS NOT EMPTY and issuetype = Task'. Below this, a list of search results is shown, including 'SAFC-147', 'SAFC-146', 'SAFC-134', 'SAFC-133', 'SAFC-132', 'SAFC-131', 'SAFC-130', 'SAFC-119', 'SAFC-87', 'SAFC-60', and 'SAFC-56'. A blue callout box points to the search filter and contains the text: 'ISSUES BY FIXED IN BUILD # OR STATUS. Find out issues that were fixed in the specific build or get the list of issues with empty, successful, or failed builds.'

The new version of add-on also includes the following features:

- Added the mechanism for storing build-specific information for improving performance of showing it in issues.
- Default indexation depth is limited to 365 days.
- Updated the TeamCity icon used in the app.

## Fixed in this release

- Resolved the issue with disappearance of the Return to search button after reloading an issue with the builds in the Issue Navigator.
- Resolved the issue with showing the warning '*The server is unavailable. Please verify the settings of the connection to this TeamCity Server*' when none builds are indexed.
