

TeamCity Integration for Jira 3.0.0

Updates in the build indexing mechanism require the complete re-indexation of your TeamCity data.

New in this release

JQL query to [search for issues](#) that relate to a specific build.

Now you can instantly find all the issues that pertain to a specific build by entering the corresponding JQL query.

The screenshot shows the Jira Search interface. The search bar contains the JQL query: `issue in issuesRelatedToTeamCityBuild(\"#221\")`. The results list shows several issues, with 'SAFC-130: Google Analytics: Tracking File drag-n-drop upload event' selected. A callout box points to the search bar with the text: **JQL QUERY TO LOOK FOR ISSUES** Find out all the issues that relate to a specific build number and see them in a list.

JQL query to [search for issues](#) against the build number which fixes the issue or against the build status (failure or success).

Now you can show only issues with the the successful or failed build status, so that you can view only the relevant information.

The screenshot shows the Jira web interface. On the left, there's a sidebar with navigation options like 'New search', 'Find filters', and 'FAVORITE FILTERS'. The main area is divided into a search filter section and an issue detail section. The search filter at the top reads: "Fixed in Build" IS NOT EMPTY and issuetype = Task. Below it, a list of filters is shown, including SAFC-147, SAFC-146, SAFC-134, SAFC-133, SAFC-132, SAFC-131, SAFC-130, SAFC-119, SAFC-87, SAFC-60, and SAFC-56. The issue detail section for SAFC-130 shows the following information:

- Details:**
 - Type: Task
 - Priority: Blocker
 - Affects Version/s: None
 - Labels: None
 - Fixed in Build: #221
- Description:**

As a PO I want to track the File drag-n-drop upload event, so that I can see whether user directly upload files into the space storages and whether they attach document revisions.

This should show whether we need a more transparent way for uploading bulk of files and revisions of documents.

The details on additional dimensions for tracking are available on the linked page.

The new version of add-on also includes the following features:

- Added the mechanism for storing build-specific information for improving performance of showing it in issues.
- Default indexation depth is limited to 365 days.
- Updated the TeamCity icon used in the app.

Fixed in this release

- Resolved the issue with disappearance of the Return to search button after reloading an issue with the builds in the Issue Navigator.
- Resolved the issue with showing the warning 'The server is unavailable. Please verify the settings of the connection to this TeamCity Server' when none builds are indexed.
