Talk for Confluence 1.7.5

StiltSoft is happy to announce the release of Talk for Confluence version 1.7.5.

What's New

This version resolves the issue with the view of an error message in standard comments and links the page title in email notifications to the appropriate Talk thread.

This version resolves the issue with display of an error message as plain text if inserting the Talk macro in standard comments.
It also adds an improvement for email notifications that now include a link leading the user to the page with the highlighted Talk thread.
