# Awesome Graphs 1.5.0

This major release adds the improvements for Contributors and Commit Activity graphs.

## New in this release

Commit Activity graph

Graph now shows a tooltip with the number of commits when you're hovering over a week bar.

Also now you can navigate with the arrow keys by week bars directly from your keyboard.

Contributors graph

Graph now shows code additions and code deletions made over repository's life.

Also performance and responsiveness for repositories with a large number of commiters have been improved.

Contributions graph

Commit contributions are only counted when the email address you used to commit is associated with your Stash account.
