New in this release

Added the Folder attachments macro for inserting the lists of attachments on pages.

Now you can embed documents from a specific folder into the Confluence page. So your teammates can instantly see the files from this folder on a list and collaborate on them.

OKR Training

Created by Nigel Mansell, last modified just a moment ago

What are OKRs?
View details...

How to use OKRs?
View details...

Once defined, communicate OKR objectives and key results to all stakeholders and make sure they are understood. If needed, tune the wording together to have a common understanding.

As people start working, they update their result indicators regularly - weekly is a good period. An objective is considered done when 70-75% of its results have been achieved. If 100% of objectives results get done, it's not considered ambitious enough.

Review OKRs regularly, as needed. Be flexible. If your company, team or personal goals change, feel free to change the OKRs together as well. No process should be more important than common sense and everyday business.
