How to use Table Transformer macro

This version of the app's documentation is outdated. Please find the information you're looking for here:

- How to use Table Transformer macro

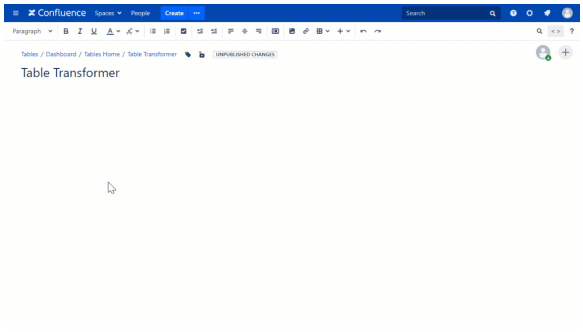

Table Transformer is one of the macros bundled in the (OUTDATED) Table Filter and Charts for Confluence app. The macro allows you to merge and associate all kinds of tables using both automatic presets and advanced SQL queries.

See the next pages for the details:

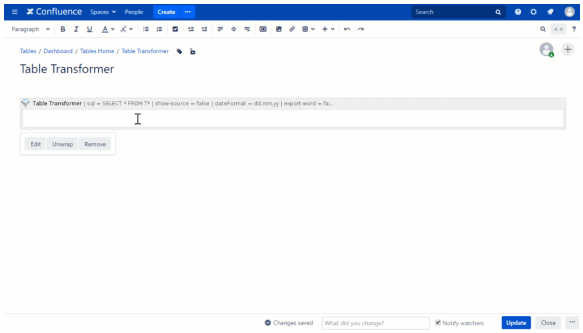

- Default automatic presets
- Custom Transformation - use cases with advanced SQL queries

What do I need to get started?

Step 1. Add the macro to the page in the edit mode:

Step 2. Place tables or macros outputting or including excerpted tables in the macro placeholder:
