

Version 1.4.0

New in this release

The add-on has received support for TeamCity 8.1. Now you can easily view the data from the most recent version of the continuous integration server in your Confluence.

Fixed in this release

- Resolved the issue with impossibility to create the TeamCity Project and the TeamCity Build Configuration macros on Confluence 5.3-5.4;
- Resolved the issue with two empty entries in the Project Name list when adding the TeamCity Project macro.
