The Result:

Macro combination:

1. Insert the [Jira Issues](#) macro.
2. Add a table containing additional information for merging.
3. Wrap the [Table Filter](#) macro and the table containing additional information in the [Table Transformer](#) macro.
4. Wrap the [Table Transformer](#) macro in the [Table Filter](#) macro.
5. Wrap the [Table Transformer](#) macro in the [Pivot Table](#) macro.
6. Wrap the [Pivot Table](#) macro in the [Chart from Table](#) macro.

The screenshot shows the macro configuration interface with the following steps:

- Chart from Table**: The final macro being used, with parameters: type = Column, is3d = false, column = sprint, aggregation = Sum of story points, type = Sum, sort = false.
- Pivot Table**: A step where the column is sprint, row is Team, aggregation is story points, type is Sum, and sort is false.
- Table Filter**: A step where the column is Assignee, Status, sprint, datepattern is yy-mm-dd, and default is .Done,-Empty- | case-insensitive.
- Table Transformer**: A step with SQL: `SELECT * FROM T1 OUTER JOIN T2 ON T1.'Assignee' = T2.'Assignee' | show`.
- Table**: The resulting table from the transformer, showing Assignee and Team mapping.
