

## Viewing Builds within Issues

While viewing a specific issue, you can find out a list of builds that relate to this issue. You can see the list of builds on the TeamCity tab. The amount of information about the build is the same as in the project view. You can quickly transition to TeamCity and view details by clicking the project, branch and build configuration name, or the build number.

You can filter builds by one of the following parameters:

- Status
- Build Period
- Agent
- Project

If you use Jira Cloud with the new issue view, you may need to select the TeamCity tab to display in the issue.

The screenshot displays the TeamCity web interface. At the top, navigation links include 'All Activity', 'All Comments', 'Work Log', 'History', 'Activity', and 'TeamCity'. The main header shows 'Status All' and 'Build Period All - Agent All - Project All'. Below this is a search bar and a list of build configurations. The first configuration is 'elasticsearch Master #4', which is currently in a 'SUCCESS' state. A blue arrow points from the 'CLICK TO VIEW BUILD CONFIGURATION IN TEAMCITY' annotation to the top right corner. Another blue arrow points from the 'CLICK TO VIEW COMMIT LOG' annotation to the 'Commit Log' link. A third blue arrow points from the 'FILTER BUILDS BY STATUS, PERIOD, AGENT, AND PROJECT' annotation to the filter bar. The interface also shows a table of build results with columns for Start Date, Changes, Duration, and Tests.
