

Table Filter and Charts 5.0.27

New in this release:

- Added a capability to include the same macros multiple times into a page.
- Added a compatibility with [Task Manager for Confluence](#) app.

Fixed in this release:

- Resolved the issue with table export to PDF with merged cells.
- Resolved the issue with skipping the Table Filter total row when building a chart on the basis of a horizontal table layout.
- Resolved the issue with duplicated total column label when the first row is frozen and the total row is outputted in the Table Filter macro.
- Resolved the issue with Scroll PDF export of a table in an unfiltered state.
