Table Filter and Charts 5.1.2

New in this release:

- Bubble Pie chart shows full range of axis even when there are no relevant values.
- Pivot Table macro formats "today" variable from the source table as a date when aggregating against day period.

Fixed in this release:

- Resolved the issue with blank event labels when building a Gantt chart on the basis of a single table.
- Resolved the issue with changing colors in the Gantt chart when filtering source tables.
- Resolved the issue with impossibility to update some old Chart from Table and Table Excerpt Include macros.
- Resolved the issue with not showing Table Excerpt Include macro preview wrapped with Table Excerpt macro with the same name.
- Resolved the issue with date picker in macro editor in Confluence 7.0.
