

How to use Table Transformer macro

This version of the app's documentation is outdated. Please find the information you're looking for here:

- [How to use Table Transformer macro](#)

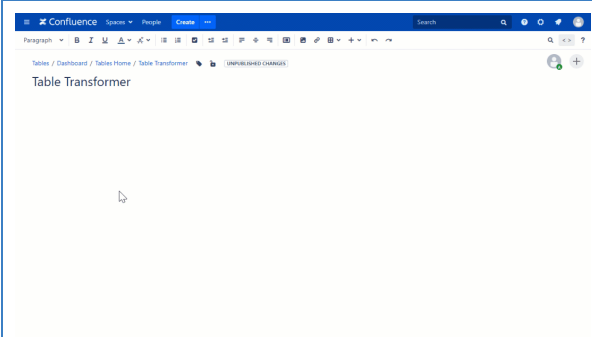

Table Transformer is one of the macros bundled in the [\(OUTDATED\) Table Filter and Charts for Confluence](#) app. The macro allows you to merge and associate all kinds of tables using both automatic presets and advanced SQL queries.

See the next pages for the details:

- [Default automatic presets](#)
- [Custom Transformation - use cases with advanced SQL queries](#)

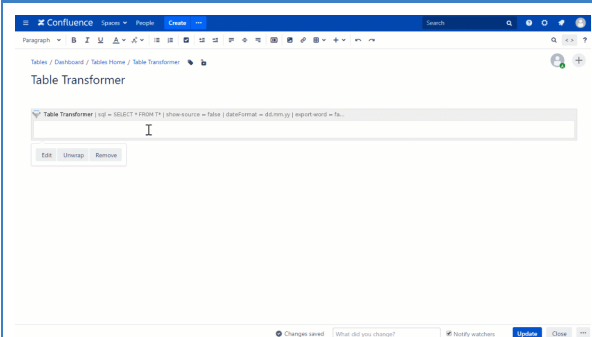

What do I need to get started?

Step 1. Add the macro to the page in the edit mode:

The screenshot shows the Confluence editor interface. At the top, there's a blue header bar with the text "Step 1. Add the macro to the page in the edit mode:". Below this, the editor area shows a paragraph with the text "Table Transformer". The macro is represented by a small icon and a plus sign, indicating it has been successfully added to the page.

Step 2. Place tables or macros outputting or including excerpted tables in the macro placeholder:

The screenshot shows the Confluence editor interface. At the top, there's a blue header bar with the text "Step 2. Place tables or macros outputting or including excerpted tables in the macro placeholder:". Below this, the editor area shows a paragraph with the text "Table Transformer". Below the text, there's a placeholder for the macro, which includes a text input field with a cursor, and buttons for "Edit", "Unwrap", and "Remove".
