

# Export to CSV

 This feature is available only in Awesome Graphs for **Bitbucket Server**.

Awesome Graphs gives a capability to export raw data with the statistics across all projects and repositories to a CSV file. As a result, you will get the list of the commits or pull requests made during the selected time span with their details.

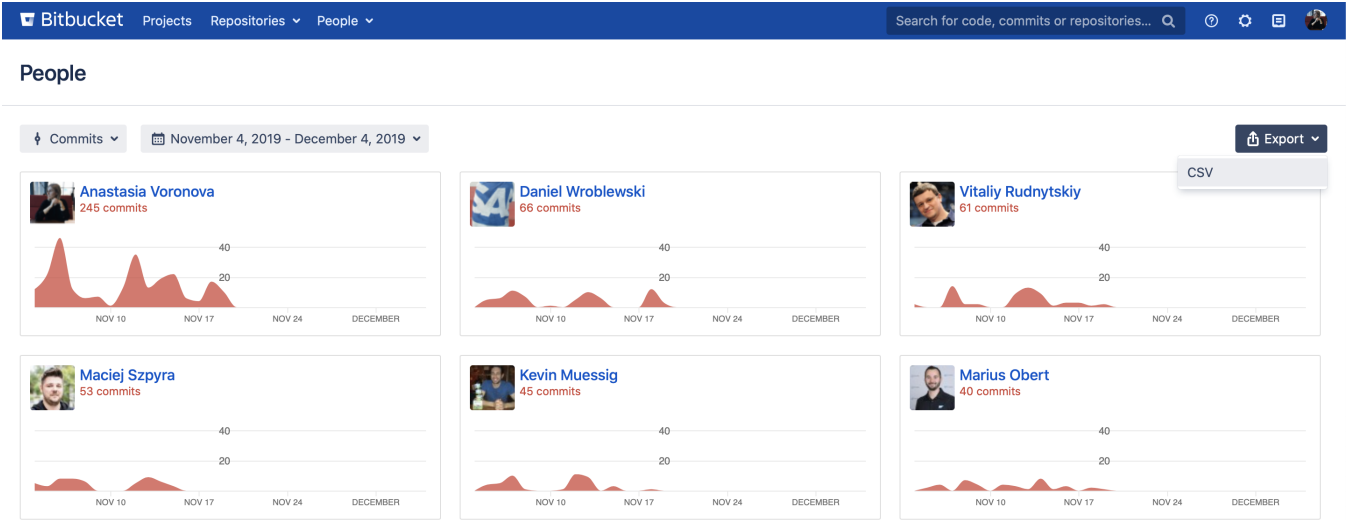

This data can be exported using the Export button at the top-right of the [People](#) page and used to:

- create custom graphs and apply different filters and sorting options in Excel, Tableau, Google Spreadsheets and so on
- integrate it to your analytics tool (e.g., Tableau, Grafana, Power BI) to identify trends in comparison with the data from Jira and other sources
- get the number of lines of code added and deleted by a user across all projects and repositories
- create a report based on the developers' activity to share it with stakeholders.

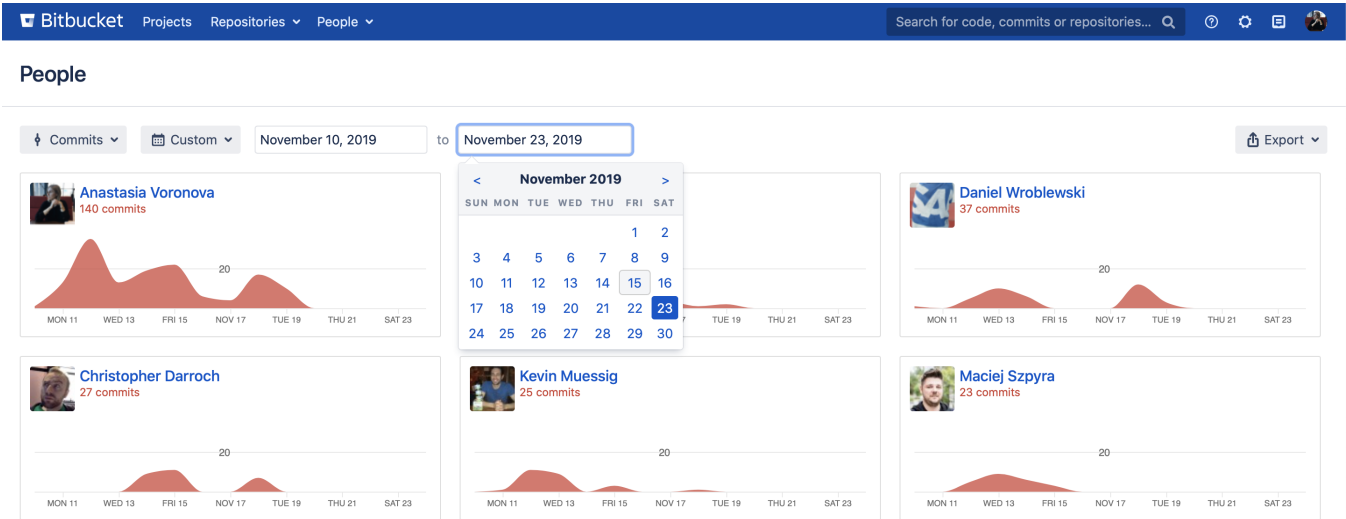

## Export the list of the commits

The data for a CSV file is gathered based on the activity type and time span that you select at the top of the [People](#) page, e.g. if you choose **Commits** and **Last month**, you'll get a CSV file with the list of the commits made during the last month.

To export the selected data click the **Export** button and choose **CSV**.

There can be any custom time span of up to the last three months.

The details of **commits** that can be found in the list are the following:

- Creation date in ISO 8601 format
- Author's email, full name, and username

- Repository name
- Project name
- Commit hash
- Whether it is a merge commit or not
- Lines of code added
- Lines deleted

The details about **pull requests** in the list are:

- Pull request creation date in ISO 8601 format
- Pull request last updated date in ISO 8601 format
- Author's username
- Repository name
- Project name
- State
- Pull request's ID
- Reviewers' full names and usernames
