The Three Laws of Robotics

@ 8 Added by StiltSoft, last edited by Bender on Sep 05, 2013 (view change)

The Three Laws of Robotics (often shortened to **The Three Laws** or **Three Laws**) are a set of rules devised by the science fiction author [Isaac Asimov](#). The rules were introduced in his 1942 short story "Runaround", although they had been foreshadowed in a few earlier stories. The Three Laws are:

1. A robot may not injure a human being or, through inaction, allow a human being to come to harm. 
2. A robot must obey the orders given to it by human beings, except where such orders would conflict with the First Law. 
3. A robot must protect its own existence as long as such protection does not conflict with the First or Second Law.
